

## C3- S4 EXERCICE

Starting from this design (START\_CODE.html) :

*Initial design*

We want to optain the following design :

*Final design*

For this exercceie you can use only the following rules:

- display: flex;
- justify-content: xxx
- flex-direction: xxx
- align-items: xxx

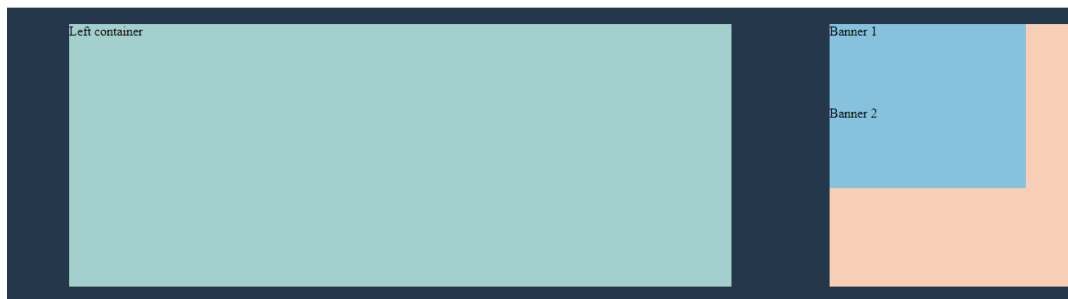

## TIPS !

Flexbox child element can also be a Flexbox container of **other elements**. Look at the final design : we have a dark blue Flexbox container with two child elements.

The light orange box serves two purposes:

- it is the child element of the dark blue container
- but it is also a flexbox container itself, containing two lightblue child elements.

**STEP 1** : Apply rules on **.container** class to obtain the following result:

**STEP 2** : Apply rules on **.right-container** class to obtain the final result:
